

Suction hose FS 8 Superflex High Performance

Characteristic

The FS 8 Superflex High Performance suction hose is a consistent further development in the area of suction lines, with the aim of further improving flexibility and improved handling properties when diving and when setting up on the platform. It is a result of the constant development work of the H&V factory teams .

This hose made of PVC with a super-elastic NBR mixture for low temperatures is stiffened by a counter-impact spiral made of a non-soft PVC. Special PVC gives these hoses great flexibility and strength compared to standard hoses.

This suction hose is available with a standard, sports coupling or with a WM Profi sports coupling . With our sports clutch systems, optimal, safe and fast coupling is possible without any further processing. This also ensures that the quality of the coupling properties remains consistent over a long period of time .

The Variant WM Profi is characterized by an optimized cleat system . This enables faster and safer engagement . The Knaggen ergonomics make it easier and quicker to turn on the clutch.

Technical data

DIN:	EN ISO 14557
Weight:	2600 g/m
Bending radius:	240mm
